

safer, smarter, more sustainable parish schools

Help us increase the safety of students, decrease maintenance costs, and position the Archdiocese of Indianapolis at the forefront of sustainability with the new Activeion Pro.

Based on advanced cleaning technology proven in hospitals, four-star restaurants, and food processing facilities, the Activeion Pro ionizes tap water to create an effective general purpose cleaner and eliminate the risks and costs of traditional cleaning chemicals.

Safer Students

When used as directed, the Activeion Pro removes greater than 99.9 percent of harmful bacteria, leaving both a clean and sanitized surface (EPS Est. # 086143-MN-001)

Smarter Savings

The Grand Haven Area School District in Grand Haven, MI, replaced 8 general purpose chemicals with 50 Activeion Pros, saving over \$22,000 in the first year alone.

Sustainable Schools

By switching to the Activeion Pro, the Archdiocese of Indianapolis would demonstrate leadership in sustainability by reducing the environmental impact of manufacturing, transporting, and disposing of cleaning chemicals and the related packaging.

With just the Activeion Pro and a faucet, you will have a virtually endless supply of safe, sustainable cleaning at a fraction of the cost you are paying today.

SPECIAL OFFER!

Request a demonstration of the Activeion Pro today and receive the special price of \$295 PLUS receive 12 blue microfiber cloths FREE (a \$30.00 value).
